

## LIST OF TABLES

<b><u>Table</u></b>	<b><u>Page</u></b>
II A.1     Hard-sphere penetrability (penetration factor) $P$ , level shift factors $S$ , and potential-scattering phase shifts $\phi$ for orbital angular momentum $l$ , wave number $k$ , and channel radius $a_c$ , with $\rho = ka_c$ .....	9
II B2.1     Parameter values used to illustrate Reich-Moore vs. full R-matrix calculations .....	44
II C1.1     Spin and angular momentum conventions used in SAMMY .....	56
II C1 a.1     Allowed values for the sum of two quantized vectors .....	60
III C1.1     Resolution-broadening input parameters .....	141
III C3 b.1     Default values for parameters for RPI resolution function. ....	171
III C3 b.2     Parameters suitable for use with experimental data from GELINA at IRMM and from nTOF at CERN. ....	172
III C5.1     Format for numerical UDR function file. ....	175
III E4.1     Default parameter values for paramagnetic cross sections. ....	199
IV D2.1     Types of parameters that may be PUP'd .....	251
VI.1         SAMMY input files .....	305
VI A.1         Format of the INPut file .....	309
VI A1.1         Categories for alphanumeric commands .....	328
VI A1.2         Alphanumeric statements for use in the INPut file, card set 3. ....	330
VI A1.3         Alphabetical list of acceptable commands for card set 3. ....	369
VI B.1         Header lines for card sets in the PARAmeter file .....	381
VI B.2         Format of the PARAmeter file .....	385
VI B.3         Format of the PARAmeter file when spin group information is included here. ....	429
VI C1.1         MULTI-style format for the DATa file .....	434
VI C2.1         Format of the data covariance file .....	436

## LIST OF TABLES (continued)

<b><u>Table</u></b>	<b><u>Page</u></b>
VI C3 b.1 Format for user-supplied IDC file.....	442
VI D.1 Types of integral data.....	445
VI D.2 Format of the NTG file .....	446
VI E.1 Input for a typical SAMMY run starting with a new PARAmeter file.....	447
VI E.2 Complete list of input files for SAMMY runs, in the order in which they will occur .....	448
VI F1.1 Format of the AVG file.....	454
VI F1.2 Format of the BONdarenko file .....	455
VI F2.1 File needed for generated ENDF File 2 output.....	459
VI F2.2 Key-word-based file needed for generating ENDF File 2 output.....	460
VI F4.1 Format for File 3 cross sections to be added for stellar averages .....	466
VI F5.1 Format of the SAMMY CLM file (Crystal-Lattice Model).....	467
VII.1 SAMMY output files .....	469
VII B.1 Binary COVariance file .....	476
VII C.1 Sections of the ODF file generated by SAMMY, for transmission or total cross-section data .....	479
VII C.2 Sections of the ODF file generated by SAMMY, for energy-differential data that are neither transmission nor total cross section.....	480
VII C.3 Sections of SAMMY.ODF when data are angular distributions .....	481
VII C.4 Sections of the ODF file SAMMY.DAT generated by SAMMY when data are angular distributions.....	481
VII D.1 Contents of the output file SAMMY.PDS .....	484
VII E.1 Map from true correlation coefficient $C$ to integer $M$ and back to approximate coefficient $c$ for compact format.....	486
VII F.1 Columns of SAMMY.PUB file.....	487

## LIST OF TABLES (continued)

<b><u>Table</u></b>	<b><u>Page</u></b>
VII F.2    Converting SAMMY.PUB into a spreadsheet .....	488
VIII B.1    Formats for original PARAmeter file for treatment of the unresolved resonance region .....	509
VIII B.2    Formats for annotated PARAmeter file for treatment of the unresolved resonance region .....	511
VIII B.3    Energy ranges encountered in the unresolved resonance region .....	516
IX.1        Key-word-based file needed for generating ENDF File 3 output.....	529
IX A.1      Exact values of constants as used in the current version of SAMMY .....	532
X.1         SAMMY auxiliary codes .....	533
X A.1       Contents of the ODF file SAMMY.DAT .....	537
X A.2       Contents of the ODF file SAMMY.ODF for angular distribution data.....	537
X A.3       Contents of the ODF file created by program ANGODF .....	538
X C.1       Commands to analyze data from three samples of different thicknesses at two different temperatures .....	545
X C.2       The initial PARAmeter file t007a.par for the example of Section X.C .....	548
X C.3       Intermediate PARAmeter file raa.par .....	548
X C.4       Intermediate PARAmeter file rcc.par .....	548
X C.5       Intermediate PARAmeter file rdd.par .....	549
X C.6       Intermediate PARAmeter file ree.par .....	549
X C.7       Intermediate PARAmeter file rff.par .....	549
X C.8       Intermediate PARAmeter file rgg.par .....	550
X C.9       PARAmeter file rhh.par, containing final results for the example of Section X.C .....	550
X C.10      PARAmeter file rii.par, which is a permutation of the file rhh.par .....	550
X C.11      PARAmeter file rkk.par, which is a permutation of the file rhh.par.....	551

## LIST OF TABLES (continued)

<b><u>Table</u></b>	<b><u>Page</u></b>
X C.12    The PARAmeter file r1l.par, which is a permutation of the file hh.par.....	551
X F.1     Input for program SAMDIS.....	558
X J.1     Input options for SAMQUA in particle-pair mode.....	566
X N.1     Input for Program SAMSTA .....	575
X P.1     Variables appearing in the “suggel.inp” file .....	580
XI B.1    Possible solutions to some common problems .....	601
XII A.1   Computer exercises for the student.....	612
XII B.1   SAMMY test cases .....	614
XII C.1   Sample Monte Carlo simulations.....	623
XIII A.1   Illustration of dynamic allocation of array storage .....	627
XIII B.1   Files used by SAMMY .....	632
XIII C.1   Segments of the code SAMMY .....	642
XIII E.1   Arguments for ODF subroutines.....	654
XIII F.1   Installation instructions for SAMMY, as given in the INSTALL file.....	656
